

Compliance on individual nutrients

With our objective to increase the percentage of products that complies with the FrieslandCampina Global Nutritional Standards, we also strive for an increase in compliance on the individual nutrients. This analysis was done for 2019, based on the applicable Global Nutritional Standards (2016-2020) at that time, and for 2021, 2022 and 2023, based on the currently applicable and generally more stringent Global Nutritional Standards Next Level (2021-2025).

The table below shows the percentages of sold consumer products in scope for the individual nutrients that comply with the relevant individual nutrient thresholds. From 2019 to 2021 - due to the more stringent criteria on Energy, SAFA, Added sugar and Sodium the GNS compliance scores declined for these nutrients. From 2021 to 2023 the high compliance levels are maintained and for added sugar slightly increased.

Year	Percentage of the volume sold consumer products that meets the threshold of the relevant individual nutrient.				
	Energy per serving	Saturated fat	Industrial transfat	Added sugar	Sodium
	FC Global Nutritional Standards (2016-2020)				
2019	86%	50%	100%	79%	98%
	FC Global Nutritional Standards Next Level (2021-2025)				
2021	81%	47%	100%	76%	96%
2022	78%	46%	100%	77%	94%
2023	79%	46%	100%	79%	96%
